Medical Marijuana effectively relieves extreme pain, which accompanies muscular dystrophy. In most cases, marijuana is a better solution for pain relief than opioids because it can be used long-term for chronic pain. Medical cannabis is also effective at reducing the length and severity of muscle spasms and cramps.

Interviewed patients with chronic pain using smoked herbal cannabis therapeutically n=15 (median duration of use six years) Twelve improved in pain and mood, while 11 improved in sleep. Eight reported a "high" (state of euphoric intoxication); six denied a "high". Tolerance to cannabis was not reported. Ware et al., 2003
